The "CVE Cross-Reference" report lists the CVE numbers and the associated results for each CVE number. Only CVE numbers are included for executed checks. CVE is the "Common Vulnerabilities and Exposures" which is a list of standardized names for vulnerabilities and other information security exposures. CVE aims to standardize the names for all publicly known vulnerabilities and security exposures. The goal of CVE is to make it easier to share data across separate vulnerability databases and security tools. While CVE may make it easier to search for information in other databases, CVE should not be considered as a vulnerability database on its own merit. The Department of Homeland Security (DHS) maintains the National Vulnerability Database (NVD), which is based on CVE numbers. Both the CVE and NVD websites contain detailed information and links to additional information for each vulnerability.
